

DON'T WAIT UNTIL YOU HAVE WATER IN THE BASEMENT

GO TANKLESS!

Save up to \$500 on a State-of-the-Art Propane Water Heater

It's time to upgrade from old, inefficient, electric and oil units

The average lifespan of a water heater is only 10 years. If you wait until there's water in your basement, your choices will be severely limited.

Ask our technician about our incredible tankless models. They provide virtually endless hot water on demand, and cost less to operate than old-fashioned electric models. Turn the handle and get as wet and wild as you want- for as long as you like. You won't run out. Even a standard propane unit delivers twice as much hot water as your old electric one.

Talk to our tech, or call your branch office.

But please do it now, when you can get maximum savings. **IN THE 68 YEARS HOCON HAS BEEN OPERATING, WE'VE NEVER OFFERED A BETTER DEAL.** Financing available.
